Playground Surfacing/Waste Tire Products ***SFY 2009 Waste Tire Grant Program***

Vendor Information Form

*The SFY 2009 Kansas waste tire grants will emphasize the purchase of playground cover material and other waste tire-derived products. **For products to be eligible for reimbursement with grant funds the Manufacturer or Distributor must be placed on the approved vendor list prior to grant awards.***

- The priority of this grant round is to provide financial assistance to local units of government to purchase waste tire derived products.
- Applicants must propose to purchase only products accepted to the Kansas Waste Tire Grants program approved vendor/products list.
- The product supplier will be responsible for any installation training or guidance.
- Grant applicants seeking more than \$10,000 for one large or more complex project must submit a **construction quality proposal** with the grant application; which identifies a “quality officer” and the qualifications of that person. It must also confirm that the quality officer will be on-site during all construction activities. A final certification statement will be required for final payment of grant funds.
- KDHE SFY 2009 Waste Tire Management Grants will not pay for **salaries, labor to install loose fill, planning, design, drainage, base preparation, or other surfacing (not made from waste tires)**; but these costs may be used towards the 50% matching funds with prior approval.
- Playground surfaces that meet the ADA recommendations will be given strong preference over projects that do not.
- **The Manufacturer or Distributor must submit testing; certifications; warranties; and Kansas tire history reports to KDHE to be placed on the approved vendor list.**
 1. Warranties applying to the functionality, coating, color, wire-free status, etc. are to be filed with KDHE Waste Management Grants Program along with this 2-page certification.
 2. Waste tire derived products composed of multiple materials must be no less than 50% waste tire material by weight, **unless composed of other recycled material. Partial funding may be available for products with tire content less than 50%.**
 3. Quarterly reports showing tonnage of Kansas Waste tires processed at the manufacturing facility will be required.
 4. Playground Surfaces must be tested to ASTM 1292-04 (Head Impact - critical fall height)
 5. Playground Surfaces must also be tested to ASTM F1951 (Standard Specification for Determination of Accessibility to Surface Systems Under and Around Playground Equipment.)
 6. Materials and Installation of Playground Surfacing must conform to Consumer Product Safety Commission guidelines for Public Playground Safety (Publication 325).
 7. Installations of non-coated, all-black playground surfacing material will be required to have signage to warn users of the temperature hazards in Kansas. (Coating and coloring recommended)

This page intentionally left blank for double-sided printing of form.

Playground Surfacing/Waste Tire Products

SFY 2009 Waste Tire Grant Program

Waste Tire Derived Product Certification

Due to the difficulty in evaluating larger or complex projects, please provide as much information as possible for the file. The committee must be able to quickly evaluate the environmental or health benefits of such projects.
